

Luciteria Collector Cabinet - UX Improvements Summary

Date: June 5, 2026

Changes Implemented

1. Doubled Font Sizes in Periodic Table Cells

Affected Pages: Collection (`/app/cabinet/periodic-table`) and Shop (`/app/cabinet/shop`)

File Modified: `/app/tailwind.css`

Changes:

- **Atomic Number** (`.cell .num`): 9px → **18px**
- **Element Symbol** (`.cell .sym`): 16px → **32px**
- **Element Name** (`.cell .nm`): 7px → **14px**

Impact: Significantly improved readability of the periodic table across all pages. Element symbols are now much more visible and easier to identify at a glance.

2. Removed Lanthanide/Actinide Placeholder Boxes

Affected Pages: Collection and Shop (all pages using `WireframePeriodicTable` component)

File Modified: `/app/components/WireframePeriodicTable.jsx`

Changes:

- Removed the two gray placeholder boxes that displayed “57-71” and “89-103” in the main periodic table grid
- Lanthanides and actinides continue to display in separate rows below the main table

Impact: Cleaner, less cluttered periodic table layout that matches modern periodic table designs.

3. Onboarding Step 3 - Format Selector with Locking Logic

Affected Page: Onboarding Step 3 (`/onboarding/log-owned`)

File Modified: `/app/routes/onboarding.log-owned.jsx`

New Features:

A. Format Selector Card

- **Blue gradient card** with filter icon matching Shop page styling
- **Label:** “Step 1: Choose Your Preferred Format”
- **Dropdown:** Shows all available collection formats (10mm Cube, 1-inch Cube, 50mm Cube, Lucite Cube, Ampoule)

B. Step-by-Step Workflow

- **Step 1:** Format selector prominently displayed in blue gradient card
- **Step 2:** Helper text “Select elements you own” with pointer icon
- Clear visual hierarchy guides users through the onboarding process

C. Locking Logic Implementation

Unlocked State (0 elements selected):

- Dropdown is enabled and clickable
- Blue chevron icon displayed
- User can freely change format selection

Locked State (1+ elements selected):

- Dropdown is disabled (grayed out)
- Lock icon displayed instead of chevron
- Helper message: “Format locked — deselect all elements to change”
- Tooltip on hover: “Deselect all elements to change format”

Unlock Condition:

- When user deselects all elements (back to 0), format selector automatically unlocks

D. Format Persistence

- Selected format is saved to user’s `subscriptionFormat` field in database
- Format choice persists throughout the application after onboarding completion

Impact:

- Prevents confusion by locking format choice once elements are selected
- Ensures consistency between selected elements and collection format
- Clear visual feedback communicates the locking state to users
- Intuitive unlock mechanism (deselect all elements)

Files Modified

1. `/app/tailwind.css`
 - Updated `.cell .num`, `.cell .sym`, and `.cell .nm` font sizes
2. `/app/components/WireframePeriodicTable.jsx`
 - Removed placeholder div elements for lanthanides/actinides
3. `/app/routes/onboarding.log-owned.jsx`
 - Added format selector state management
 - Implemented locking logic based on owned element count
 - Added blue gradient card UI matching Shop page
 - Added Step 1/Step 2 labels and helper text
 - Updated form submission to save selected format
 - Added tooltip for locked state

Testing Results

All features tested successfully:

- ✓ **Font Sizes:** Verified doubled sizes on both Collection and Shop pages
 - ✓ **Placeholder Removal:** Confirmed no placeholder boxes appear in any periodic table view
 - ✓ **Format Selector Unlocked:** Dropdown works correctly when 0 elements selected
 - ✓ **Format Selector Locked:** Dropdown disables with lock icon when 1+ elements selected
 - ✓ **Format Selector Unlock:** Dropdown re-enables when all elements deselected
 - ✓ **Format Persistence:** Selected format changes persist during onboarding session
 - ✓ **Format Saving:** Selected format saves to database on form submission
 - ✓ **Visual Styling:** Blue gradient card matches Shop page aesthetic
 - ✓ **Step Labels:** Step 1 and Step 2 labels clearly guide user workflow
-

Browser Compatibility

Changes use standard CSS and React patterns compatible with all modern browsers:

- Chrome/Edge (Chromium)
 - Firefox
 - Safari
-

Build Status

- ✓ Production build successful (`npm run build`)
 - ✓ No TypeScript errors
 - ✓ All routes functioning correctly
 - ✓ Database migrations applied successfully
-

Recommendations for Future Enhancements

1. **Accessibility:** Consider adding ARIA labels to the format selector for screen reader support
 2. **Animation:** Add smooth transition effects when format selector locks/unlocks
 3. **Mobile:** Test and optimize the blue gradient card layout for smaller screens
 4. **Persistence:** Consider adding format filter to Collection page to show only elements available in selected format
-

Notes

- All changes maintain the neutral gray/white aesthetic established in Phase 2
- Blue accent color used for format selector card provides visual consistency with Shop page
- Locking logic prevents data inconsistency between format selection and owned elements
- Font size increases improve accessibility without requiring layout changes
