

Phase 2 Sitemap (Simplified)

Overview

This sitemap shows the complete application structure including Phase 1 (existing) and Phase 2 (new) routes. The Phase 2 admin dashboard has been simplified to MVP scope focused on essential collection intelligence.

Complete Application Routes

Public Routes

```
/
├── / (landing/auth)
└── /auth/callback (Shopify OAuth)
```

User Routes (Phase 1 - Existing)

```
/app
├── /app/cabinet
│   └── Main collector dashboard
│       ├── - Interactive 118-element periodic table
│       ├── - Filter by collection format (10mm, 25.4mm, 50mm, Lucite Cubes, Ampoules)
│       ├── - Element state indicators (Owned, Missing, Wishlisted)
│       └── - Quick stats: completion %, elements owned, milestones
├── /app/collection
│   └── Detailed collection view
│       ├── - Owned items grid with photos
│       ├── - Filter by format and status
│       └── - Export collection data
├── /app/wishlist
│   └── Wishlist management (Enhanced in Phase 2)
│       ├── - Prioritized list of wanted elements
│       ├── - Context labels (Phase 2): Core, Exploration, Aspirational, Upgrade Target
│       ├── - Auto-detection with manual override
│       ├── - Filter by context and restock status
│       └── - Stock alerts configuration
├── /app/goals
│   └── Collection goals and milestones
│       ├── - Progress tracking toward custom goals
│       ├── - Milestone achievements (10%, 25%, 50%, 75%, 90%, 100%)
│       └── - Rarity achievements
├── /app/shop
│   └── Integrated shop experience
│       ├── - Smart recommendations based on wishlist
│       ├── - Hide owned elements
│       └── - Direct links to Shopify product pages
└── /app/profile
    └── User settings
        ├── - Collection format preferences
        ├── - Email notification preferences (Phase 2)
        └── - Export personal data
```

User Routes (Phase 2 - New)

```

/app
├── /app/notifications
│   └── Notification Center (Phase 2 - New)
│       ├── In-app notification feed
│       ├── 5 notification types:
│       │   ├── * Completion unlock (nearby elements now purchasable)
│       │   ├── * Near-completion (90%+ in a category)
│       │   ├── * Wishlist restock alerts
│       │   ├── * High-relevance product arrivals
│       │   └── * Milestone celebrations
│       ├── Mark as read/unread
│       ├── Email delivery preferences
│       └── Frequency limiting controls
├── [Element Notes Drawer]
│   ├── Not a separate route - opens as drawer/modal from cabinet
│   ├── Accessible from any element card
│   └── Fields: Acquisition date, source, price paid, condition, storage location, notes
│       , private flag

```

Admin Routes (Phase 2 - Simplified MVP)

```

/app/admin
├── /app/admin (Overview Dashboard)
│   └── Collection Intelligence Hub
│       ├── Key Stats Cards:
│       │   ├── * Total Users
│       │   ├── * Total Collections Tracked
│       │   ├── * Avg Elements per User
│       │   └── * Active Users (last 7 days)
│       ├── Top 10 Most Collected Elements
│       ├── Top 10 Most Wanted Elements
│       └── Recent Activity Feed (last 10 acquisitions across all users)
├── /app/admin/users
│   └── User Collections List
│       ├── Table view: User Name, Email, Elements Owned, Completion %, Last Activity
│       ├── Search by name/email
│       ├── Click row to view user's collection
│       ├── Export to CSV
│       └── View individual user's cabinet (read-only)
├── /app/admin/demand
│   └── Demand Insights Panel
│       ├── Section 1: Out-of-Stock Watchlist
│       │   ├── * Table: SKU, Element, Waitlist Count, Days Out of Stock
│       │   ├── * Export for Restocking button
│       ├── Section 2: High-Demand Items
│       │   ├── * Table: SKU, Element, Wishlist Count, Missing from X Collections
│       │   ├── * Sort by demand
│       │   └── * Export to CSV

```

Navigation Structure

User Navigation (Top Bar)

Luciteria

 Notifications

 Profile

Cabinet | Collection | Wishlist | Goals | Shop

Admin Navigation (Top Bar)

Luciteria Admin

[Back to Cabinet]

 Profile

Overview | User Collections | Demand Insights

Route Access Control

Route Pattern	Access Level	Notes
/	Public	Landing page, authentication
/app/* (user routes)	Authenticated Users	Customer-facing features
/app/admin/*	Staff Only	Requires <code>isStaff: true</code> flag in user record
/app/notifications	Authenticated Users	Personal notification center
Element Notes Drawer	Authenticated Users	Opens from cabinet, collection views

Phase 2 Route Priority

Must-Have (MVP)

- /app/admin - Overview dashboard
- /app/admin/users - User collections list
- /app/admin/demand - Demand insights
- /app/notifications - Notification center
- Element Notes Drawer (UI component)
- Enhanced /app/wishlist with context labels

Nice-to-Have (Post-MVP)

- Bulk operations panel
 - Advanced analytics dashboard
 - Export scheduling
 - Real-time activity stream
-

Key Design Decisions

1. Admin Dashboard Simplification

- **Decision:** Single overview dashboard instead of multiple specialized views
- **Rationale:** MVP should focus on essential collection intelligence without overwhelming staff
- **Scope:** Basic stats, top lists, recent activity only
- **Deferred:** Complex automation triggers, sync panels, notification management UI

2. Element Notes as Drawer

- **Decision:** Notes open in drawer/modal, not separate route
- **Rationale:** Keeps user in context of their cabinet/collection view
- **Access:** Single tap from element card “Add Notes” button

3. Notification Center as Dedicated Route

- **Decision:** `/app/notifications` is a full page, not just a dropdown
- **Rationale:** Provides space for rich notification content, preferences, and history
- **Fallback:** Bell icon dropdown shows last 3 notifications with “View All” link

4. Wishlist Enhancement In-Place

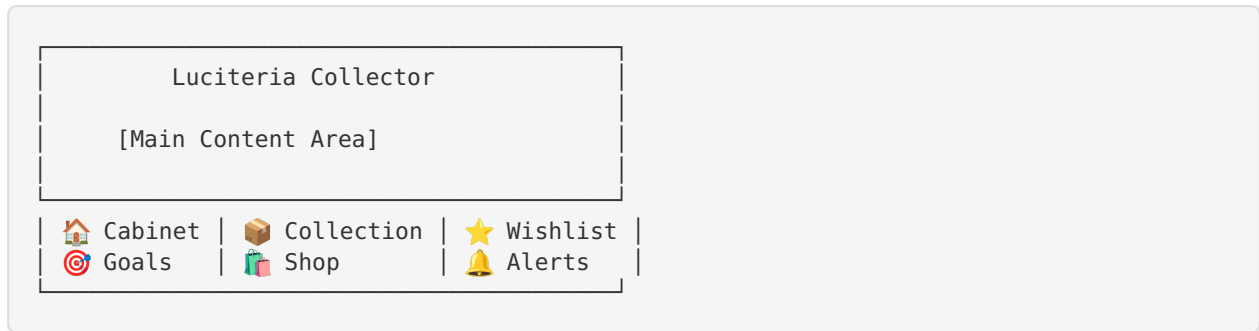

- **Decision:** Add context labels to existing `/app/wishlist` route
 - **Rationale:** Enhances existing feature without fragmenting navigation
 - **UX:** Context labels are optional enhancement, don’t break existing workflow
-

Mobile Considerations

Responsive Breakpoints

- **Desktop:** Full navigation, side-by-side layouts
- **Tablet:** Collapsible sidebar, stacked layouts
- **Mobile:** Bottom tab bar for user routes, hamburger menu for admin

Mobile Navigation (User)

Integration Points

Shopify Embedded App

- All routes render within Shopify admin iframe
- Uses Shopify App Bridge for navigation
- Session tokens for authentication

Email Notifications

- Triggered from `/app/notifications` route logic
- Uses user email from Shopify customer record
- Preferences managed in notification center

Data Export

- CSV export buttons on:
- `/app/admin/users` - User collection data
- `/app/admin/demand` - Restocking lists
- `/app/collection` - Personal collection

URL Structure Examples

User Routes

```

https://your-shop.myshopify.com/apps/collector-cabinet/cabinet
https://your-shop.myshopify.com/apps/collector-cabinet/wishlist?context=core
https://your-shop.myshopify.com/apps/collector-cabinet/notifications
  
```

Admin Routes

```

https://your-shop.myshopify.com/apps/collector-cabinet/admin
https://your-shop.myshopify.com/apps/collector-cabinet/admin/users?search=john
https://your-shop.myshopify.com/apps/collector-cabinet/admin/demand?sort=waitlist
  
```

Summary

Total Routes:

- **Public:** 2 routes
- **Phase 1 User:** 6 routes
- **Phase 2 User:** 1 new route + 1 drawer component + enhancements to 1 existing route
- **Phase 2 Admin:** 3 routes (simplified MVP)

Total Application: 12 routes + 1 modal component

Philosophy: Clean, focused navigation that prioritizes collector experience while giving staff essential intelligence tools without complexity.
